

## Expert panel for the seismic risk of geothermal projects established

Following an ML=2.7 seismic event occurring on August 15<sup>th</sup> near the site of a geothermal power plant at Landau (Germany), the Department of the Environment Rheinland-Pfalz ("Bundesministerium für Umwelt und Forsten Rheinland-Pfalz") established an expert group to analyse and evaluate the seismic risk associated with the geothermal system. Being a member of the expert panel, Q-con contributes with its know-how acquired from similar risk-studies which Q-con performed, e.g. for the Basel and the Soultz-sous-Forêts geothermal systems.
