

## Guideline for Numerical Modelling Published

A guideline for the development of geothermal reservoirs has been published by ENERCHANGE (Agency Of Renewable Energies).

Q-con has contributed to this guideline with its broad expertise on numerical simulations and provided an article covering a wide range of applications of our modelling tools:

- building reservoir models,
- thermo-hydraulic simulations,
- tracer propagation,
- stress-strain computations,
- seismic risk assessment,
- reservoir assessment and investment analysis.
